Glass Door Hinges, Latches & Strikes — 13-950 Series

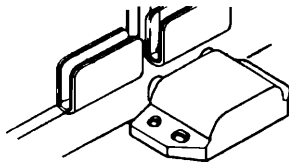

NO DRILLING OF GLASS NECESSARY!

This European glass door hardware system is receiving worldwide acclaim and attention. The concept was originated to enhance the appearance of glass showcases, cabinets and stereo components. The metal door hinges and strike plates require no drilling or cementing for attachment to glass. Pivot hinges are easy to install — merely drill hole in wood frame and insert plastic hinge pivot. Metal shaft on hinge rotates freely inside pivot. Hinges lock securely to glass with screws and insulating protective plate. Strike plates clip on easily and are held firmly by adhesive coated foam inner pad. Magnetic latches contain a strong magnet which holds door closed. Slight finger pressure releases magnet's hold to allow door to open. Hinge and strike plates are for 5mm (3/16") and 6mm (1/4") glass.
