## How to Install Your Pet Screen Door

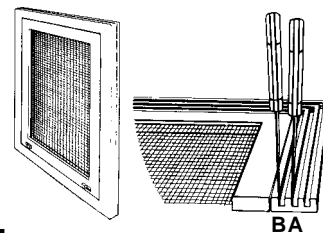

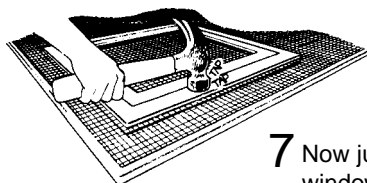

**1** Please read all instructions carefully before you begin installation.

**2** Decide which screen door or window you'd like your pet to use for entry/exit. Remove it, and place it on a hard, flat surface, with the outside of the screen facing up.

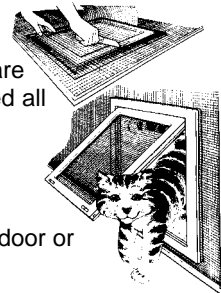

**3** Now separate the two parts of your All Glass Pet Screen Door, making sure that the locks on the frame are in the unlocked position.

**4** Place the frame (with grooves up) under your door or window screen in the location most convenient for your pet. Centre of pet screen door should be at pet's shoulder height.

**5** Now determine if your screen door or window is metal or fiber. If it is metal, cut around the entire edge of "A" with a small, sharp knife, using the grooves as a guide. If your screen is fiber, cut around the entire edge of "B", using the grooves as a guide. Be sure to hold the pet screen door frame solidly in place with one hand so it doesn't move during cutting. Remove the cut-out portion of the screen.

**6** Place the front section of the outer frame into position on the back section, *trapping* the cut edge of the screen. Using a hammer, tap the two frame sections together until they are firmly joined all around.

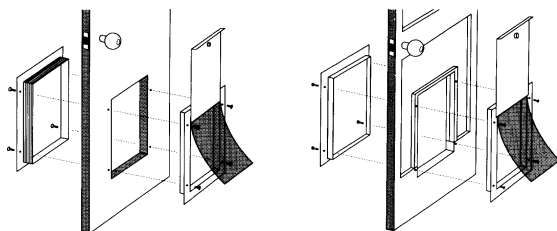

**7** Now just replace your screen door or window, and relax.
